

Acronis[®] Backup & Recovery[™] 10 Workstation

Acronis[®] Backup & Recovery[™] 10 Workstation simplifies and automates backup and disaster recovery processes of Windows desktops and laptops across physical and virtual environments, minimising downtime and increasing user productivity. Based on patented disk imaging and bare metal restore technologies, this product is the next generation of Acronis[®] True Image. It provides small organisations a simple, cost-effective solution to locally manage backup and restore activities on stand-alone Windows workstations.

Fast restore of OS and data to meet Recovery Time Objectives

With Acronis Backup & Recovery 10, the contents of an entire hard drive including the operating system, applications and data can be fully recovered in minutes, instead of hours or days, minimising impact to user productivity. In addition, with the Acronis[®] Backup & Recovery[™] 10 Universal Restore[™] option, it is easy to restore a backup image to different hardware, eliminating the need to acquire identical hardware if the machine has to be replaced.

Intuitive user interface for ease of use by IT and novices

Acronis Backup & Recovery 10 provides an intuitive interface making it easy to install, and quick to configure and deploy. Its graphical user interface (GUI) makes backup and recovery simple for both IT and novices with no external support required, saving time and resources. In addition, a graphical dashboard provides an overview of the configured and running operations on the system, for enhanced monitoring.

Advanced backup scheduling with policy-based management

Backup plans can be developed according to a company's policy or each employee's work style. The scheduled tasks will be launched systematically in the background, keeping the critical data safely protected. In addition, backup can be triggered based on preset events and conditions such as log on, log off or the addition of a certain volume of data to the system.

Flexible backup storage for mobile users

Acronis Backup & Recovery 10 supports a wide array of storage devices and location including local attached disk, Network Attached Storage (NAS), Storage Area Network (SAN), FTP server, and optical devices, as well as the unique Acronis[®] Secure Zone[®] partition. The Acronis Secure Zone is a secure partition on the local hard drive, from which the entire system or any file can be recovered without having to carry boot media.

Main Features

Fast and easy recovery

OS, applications and all data can be fully recovered in minutes, instead of hours or days.

Recover entire system, single file or folder

Acronis image-based recoveries give you the granularity you need for any kind of recovery.

Graphical User Interface

An intuitive interface makes it easy to install, configure, and use for both IT and novices.

Policy-based management

Develop policies to automate backup plans.

Monitoring

The dashboard provides an overview of the configured and running operations on a system.

Advanced scheduling capabilities

Backups triggered by events such as log on, log off or the addition of a large volume of data to the system.

Acronis[®] Secure Zone[®]

Hidden, secure partition on the local the hard drive allows for quick recoveries.

High level Security

User authentication and data encryption secure data access and transmissions.

Enhanced support for virtual environments

Comprehensive backup and recovery of VMware[®], Microsoft Hyper-V[®], Citrix XenServer[®] and Parallels[®] virtual machines.

Features

Backup Options

- Block level image backup
- File level backup
- Full backup
- Incremental backup
- Differential backup
- Microsoft Volume Shadow Copy Service (VSS) support
- Dual destination backup

Backup Targets

- Local attached disk, Network Attached Storage (NAS) and Storage Area Network (SAN)
- Acronis® Secure Zone® partition for local restore capability
- FTP server
- Optical devices

Recovery Options

- Bare-metal restore
- Acronis® Universal Restore™ option to recover to dissimilar hardware
- Recovery to different host or destination
- Single file restore
- Acronis® Active Restore™ for priority application restore

Manageability

- Local management console
- Event-based backup scheduling including log on, log off or time elapsed from previous backup and availability of backup destination
- Policy-based operation
- Graphical dashboard for operation status

Virtual Machine Support

- VMware, Parallels, Microsoft Hyper-V and Citrix XenServer virtual machine (VM) support
- Backup and recovery of files, volumes, virtual disks and even entire virtual machines

Security

- Encrypted backup images
- Encrypted network communications
- Single sign-on
- Easy to implement in firewall protected environments

Supported Operating Systems

Acronis® Backup & Recovery™ 10 Workstation

- Windows 2000 SP (Service Pack) 4+
- Windows XP SP2+ x32 and x64 Editions
- Windows Vista all SP x32 and x64 Editions
