

Acronis® Recovery™ for Microsoft® Exchange

Without e-mail, companies cannot function; period! The loss of e-mail services for an extended period of time can be disastrous. The smaller the company, the bigger the disaster, due to limited IT resources.

In fact, 93% of all companies that experience “significant data loss” are out of business within five years.

The mailbox and public folder which stores data in your Exchange databases and transaction log files are the most important data to protect as part of your e-mail disaster recovery plan. To secure them you can create an image of the entire disk contents.

However, restoring requires bringing back the entire image. If you only want to backup and restore the Exchange database contents, using a purpose-built solution is best. This is especially true if you need the capability to recover to the mailbox or message level.

As e-mail is a critical part of any business, it is essential to complete a recovery of the Microsoft Exchange Server in minutes, not hours or days. To achieve this, Acronis, the leader in disaster recovery software, developed Acronis Recovery for Microsoft Exchange. Using a flexible, intuitive interface, Exchange administrators can backup the mail database at the brick or database level, assuring users have availability to e-mail with virtually no loss of productivity.

With one-step automated backup, you can rest assure that all of your organisation’s critical communications are preserved. When disaster strikes, Acronis Recovery for Microsoft Exchange will enable you to retrieve specific e-mails, shared folders, or entire mailboxes for specific users and to maintain e-mail services.

Acronis Recovery for Microsoft Exchange is an excellent complement to the award-winning Acronis True Image family of disaster recovery and system migration products, using patented disk-imaging technology. Together, they deliver comprehensive server and workstation disaster recovery and full Microsoft Exchange database protection — a winning disaster recovery plan combination.

Ultimate Granularity

Granular restore of a mail server, mailbox, or single e-mail message.

Easy Administration

Full database backup and restore with one click using wizard-driven GUI.

A Full Range of Recovery Options

Enable recovery of data from the last known archive, a particular point-in-time, or from the Exchange server’s point-of-failure.

High Speed Performance

Multiple levels of compression to reduce backup time and save storage space.

Guided Disaster Recovery

Automatically created step-by-step disaster recovery plan that will guide the user through a recovery.

Password Protected Archives

Protects backed up database image for electronic transport.

Active Restore™

Access mailbox while database is being restored.

Database and Brick Level Backup/Restore

Flexibility and speed based on need.

Dial Tone Recovery

Continuation of e-mail services during restore.

Incremental Backup

Saves disk space, backup and recovery time.

Flexible Storage Options

Choose where your archives are automatically copied, be it on a local hard drive, network share, FTP server, or other external device.

Resource Management

Manage system resource performance with CPU and bandwidth throttling.

Centralised Management

Better control of backup and restore process from a single location.

Also available as SBS version
