Log & Security Management

With more than 1,000 customers, widespread analyst acclaim, broad industry compatibility, and more than 200 partners worldwide, LogLogic solutions provide visibility and control to any IT infrastructure so that organizations can significantly improve security, compliance, and IT operations performance.

LogLogic – Delivering Visibility & Control

Why LogLogic?

Innovation

LogLogic provides a complete line of full-featured solutions and easy integration with your existing systems. We're exclusively focused on bringing innovative log and security management to the market.

Focused Expertise

LogLogic has the largest installed base of log-powered products in the market. We have gained the trust of more than 1,000 customers, including large enterprise, government, telecommunications, and mid-market organizations.

Return on Investment

LogLogic delivers high value and low total cost of ownership. We are consistently rated #1 for ease of deployment, ease of use, and ease of management. Deploy once across the enterprise for multiple use cases. Pay back averages less than six months.

LogLogic solves a number of compliance issues ...

With the growth in regulatory industries and mandates across all industries, compliance has become one of the great challenges facing businesses today. LogLogic's family of products help ensure you monitor enterprise activity, identify and respond to threats, as well as manage and review network policies according to all industry and government rules.

- PCI DSS
- Sarbanes Oxley
- COBIT
- HIPAA
- FISMA
- GLBA
- ITIL
- ISO
- NERC

... Security concerns

Security concerns, such as hackers, internal or external information theft, fraud, and privacy violations, are a constant threat to your organization's reputation and financial integrity. Preventing a data breach or loss from your networks and databases is of paramount importance. With the LogLogic suite of products, you can comply with internal and external security policies, be notified of suspicious network activity, perform detailed forensic analysis, and take quick action to prevent future security incidents.

... And performance management issues

System downtime and performance slowdowns can severely limit network, system, and application productivity. With LogLogic, you are proactively alerted to performance degradations or error conditions before they cause expensive and frustrating downtime and can perform immediate root-cause analysis through IT search. You can also identify network inefficiencies and bottlenecks, streamline your hardware allocations, and automate the management of network policies to reduce operating expenses.

... For a variety of industries

More than 1,000 customers across a variety of industries trust LogLogic with log and security management solutions for compliance, security, and performance management. We have developed focused expertise and specific solution bundles in a number of vertical markets. LogLogic suite of products can help your organization overcome industry-specific challenges.

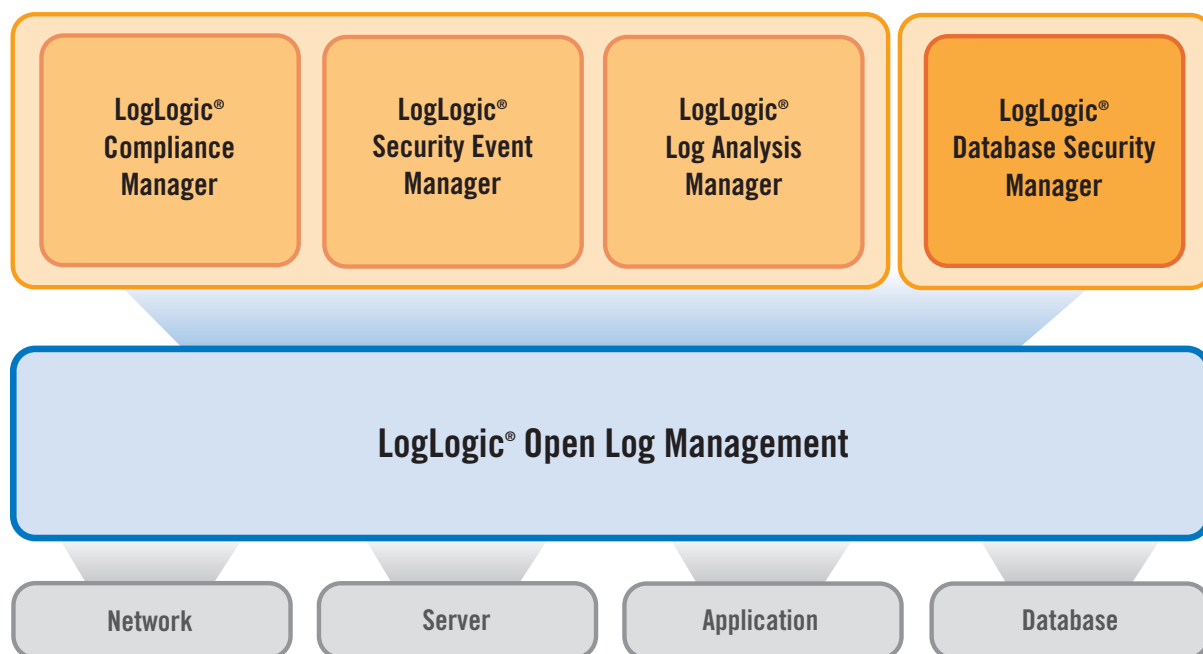

- Financial services
- Healthcare
- Retail
- Telecom
- Life sciences
- Energy
- Government
- Technology
- Education

LogLogic® Product Overview

LogLogic offers a comprehensive suite of log and security management products that help more than 1,000 enterprise and mid-market customers:

- Achieve regulatory compliance
- Protect valuable customer information
- Improve the performance of IT operations

All of our solutions work together and easily integrate with your existing infrastructure and third-party products.

LogLogic® Open Log Management

Collect, normalize, index, store, and search log data automatically with our easy-to-deploy appliances or hosted solutions.

LogLogic® Compliance Manager

Meet log and security management mandates established by specific regulatory mandates and demonstrate compliance in real-time.

LogLogic® Security Event Manager

Analyze and correlate diverse log data in real-time for identification and management of security events.

LogLogic® Log Analysis Manager

Rapidly drill down into log details and create detailed reports with our built-in templates.

LogLogic® Database Security Manager

Protect sensitive information in your databases through monitoring and real-time blocking without impacting performance.

LogLogic firsts:

- First appliance-based log management platform
- First dedicated log management products for specific compliance mandates
- First compliance workflow automation for user activity review
- First to deliver universal log processing for known and unknown data
- First to deliver full-text index based log search and reports
- First open log-powered API
- First developer community for log and security management
- First to deliver behavioral alerts based on log data
- First to combine indexed search with normalized reporting
- First NEBS compliant log and security management
- First to exceed 50,000 log message per second collection on a single appliance
- First to provide centralized log search and reporting across many appliances
- First visual heterogeneous network security policy configuration
- First focused security management vendor to exceed 1,000 customers
- First end-to-end automatic policy generation for firewalls, routers, and switches
- First security rule generation based on graphical representation
- First to automatically generate IPSec fully-meshed or hub-and-spoke VPN configurations for multi-vendor technologies
