

TADASoft - SC Europe Awards 2009 Winner

TADASoft, an award winning vendor of the Restorepoint range of innovative configuration backup appliances has cemented its position as the most innovative new security vendor by winning the prestigious SC Magazine Most Innovative Product award.

In just over a year TADASoft has gone from strength to strength firstly being nominated as a finalist in the SC Magazine awards against strong competition from established vendors such as Scansafe, then being awarded Storage Product of the year by the readers of Storage Biz.

Rory Nolan, Director of TADASoft said This is absolutely fantastic news. We knew we had a great product and to win this award from SC Magazine proves it. We have spent a lot of time and effort bringing Restorepoint to the market and have just appointed our first distributors to take this to a wider audience

TADASofts win comes on a day that Restorepoint is being exhibited at Infosecurity Europe 2009 where IT professionals are invited to come along and see how the product addresses a critical flaw in many companies backup and recovery plans. At the exhibition TADASoft are also releasing their unique Restorepoint managed service for the Managed Service Provider(MSP) market. This offering has already had some early success in recruiting some of the larger MSPs to offer the service to their customers.

Restorepoint is a multi-award winning integrated hardware and software solution for Network Administrators, which makes it easy to automatically backup and store the configuration of their network devices and to restore it when needed. This is managed from one convenient central location with an easy to use web interface. Restorepoint is the only vendor independent appliance on the market and the first product to address this commonly overlooked issue. Devices supported within Restorepoint include; Juniper, Cisco, Check Point, ProofPoint, HP Procurve, F5 Networks, Barracuda, Blue Coat etc.

Restorepoint has had a number of high profile installations including being used by TNS Global, South Lanarkshire Council, Blue Square & Friends Reunited to ensure their multi-vendor configuration files are kept safe and to facilitate rapid config restore.
